

pH Structured Silver Gel is specially designed for the skin, bringing the many benefits of structured silver to situations where “staying in place” is important. Our 100% unique silver gel is specially formulated to match the natural pH of human skin. Gels that are overly acidic can cause dryness, cracking and bleeding, while ones that are too alkaline can leave an unsightly residue. It is also alcohol and petroleum free, creating a non-burning, non-greasy, non-flaking gel that goes on smoothly helping to restore vibrant skin quickly.

pH Structured Silver Gel is ideal for topical use for the hands, face, nails, toes, minor wounds, and even genitals. It is important to note that pH Structured Silver Gel does not contain the additive TEA, an ingredient found in several competing silver gels. TEA is not a beverage, but rather stands for triethanolamine, a substance listed as a toxic chemical in common cosmetics.

Our gel has an NPN approving it for use as an antimicrobial to help treat minor skin wounds, burns, infections and affections. It is manufactured in a cGMP facility with over 130 Standard Operating Procedures that must be followed.

- ❖ Health Canada Natural Product Number (NPN): 80096251.
- ❖ Medicinal Ingredients (per dose): Silver (colloidal silver), 25mcg/ml (25ppm).
