

MICROSCOPE INFORMATION:

Because this is an investment in your practice, the information provided here ensures that you acquire the best equipment.

Many darkfield microscopes are available yet few are comparable to the Optica B510Dk. A purchase from other companies does not ensure that you receive the support you need. Froggio has included any import fees that are sometimes additional costs from other companies. Make this your one and only purchase!

- A high-quality microscope is essential so that you reap optimal value from your investment in the course.
- The recommended microscope is an **Optica B510Dk**, made in Italy. The Canadian company is FroggaBio.
- The camera must be purchased separately, and this includes a software program, which is highly beneficial for organizing and filing your acquired patient photos.
- By mentioning this course/my name, you are entitled to a 10% discount on your microscope. I receive no commissions from your purchase and am pleased to make this discount available to you.
- Plan to devote considerable time with your microscope over the next months.

It is important to confidently operate your microscope and be prepared to troubleshoot basic problems. Fortunately, these are easy to rectify. Any problems are well-supported over the phone or through videos provided by the company.

Optica B-510DK: \$5,927.25

Camera: \$1,244.85 (this is for 3MP CMOS camera with microscope adapter and the imaging software is free.)
